

Credit Name: CSE2130 - File Structures & Exception Handling
Assignment Name: CountVowels

Understanding the Problem

How did you approach understanding the challenge?

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

I completely understood the problem, especially since I knew that I could recycle some code from the CountVowels application from Chapter 5.

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?

How did you decide on the tools, data structures, or algorithms to use?

Similarly to the WordGuess mastery project, a template was given to us so that we could follow along and add the code where it was needed. The plan was just to follow along with the template.

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

How did you test your solution along the way to make sure it was working?

I started by following the steps that were given to us, but once I got to the point where I needed to code the logic to count the vowels in a text, I just recycled code from the Chapter 5 version.

Overcoming Challenges

What part of the problem was the most difficult for you?

How did you handle moments when you felt unsure of what to do next?

The most difficult part was getting the program to find and read a file. To solve this, I just looked back at the skillbuilders and compared them with the new code in order to locate the issue.

Learning

Was there anything you learned that you think will help you with future challenges?

I think my understanding of reading the files has improved.
